BUFFERMOUNT TISSUE

S2824 Buffermount Tissue-90x24.5

Buffermount Tissue is translucent white to non-white, porous, acid-free and breathable. It is coated on both sides with heat-sensitive adhesive. It is mottled with an even consistency that leaves mounted prints free of streaks, discoloration, wrinkles and ridges. It becomes completely saturated and non-porous after application; yet, it becomes porous again when heat is applied a second time to allow air and moisture to pass through during lamination. This Mounting Tissue is the safest, most versatile available. It is reversible, eco friendly and features an acid-free adhesive with a very low bonding temperature (160-190°).

Suited for: Standard papers, RC Photographs, Fiber-based Photographs, Textured Papers, Lithograph Papers, Watercolor Papers, Clay-coated Papers, Newspapers, Cotton Fabrics, Rice Papers, Brass Rubbings, Parchment, Silk, Polyester Fabric, Wooden Substrates, MDF Board, Ink Jet Papers (coated and uncoated), Foam-board, and Gatorboard.
